

ICS Bayesian Risk Assessment Report

Assessment summary

Overall risk score: 4.263

Risk level: Critical

Assets assessed: 8

Connections assessed: 7

Evidence used: scada_server: Compromised

Overall risk is the average risk of the top 5 highest-risk assets in this assessment.

Highest-risk assets

Rank | Asset | Risk score | Compromise probability

1 | engineering_workstation | 5.917 | 0.986

2 | plc_dosing | 5.782 | 0.459

3 | chlorine_pump | 3.677 | 0.354

4 | water_supply | 3.08 | 0.22

5 | historian | 2.859 | 0.715

Highest-priority attack path

scada_server -> plc_dosing -> chlorine_pump

Path score: 1.395323 (modelled priority, not proof of intrusion)

How to use this report

Prioritise high-risk assets for investigation or treatment. Risk combines compromise probability with configured consequence impact; compare only assessments using the same topology assumptions and model settings.
